

hi-Led is a LED Bluetooth lightbulb with built-in speaker that transforms a simple lamp in a Bluetooth stereo source. It works like a bulb, but it surprises like a stereo. Using it is easy: you just need to turn the light on and it will magically start playing the music stored in the device to which it is associated. Its modern design makes it perfect in any environment by creating the perfect atmosphere in which sound and light merge.

Mercury free.

- Specifications:**  
Illumination angle: 90°  
Input voltage (V): AC100~240, 50/60Hz  
Power consumption: Audio 10W - Light 5W  
Power efficiency: ≥75%  
Color temperature: 3000°K  
Audio output power: 2.5w  
Audio distortion: ≤ 0.5%  
Frequency response: 36-20KHz

Colors: White

COD: HFHILED-WHT
